Since the States Government began, 7 years, 30. dayes.

A generall Description of the foure
parts of the Yeare; and first, of
the *Spring*.

The Spring beginneth with the Suns ingresse
into the first minute of the Equinoctiall Signe
Aries, which hapneth with us upon Saturday the
10 of March, 48 min. past 11, in the afternoon; and
continueth the Suns curren through Aries, Taurus,
and Gemini, and causeth equal day and night to the
Inhabitants of the whole Earth. Now he taketh
his leave of the Southern, and beginneth to send
forth his comfortable influence to the Northern part
of the world.

Of Summer.

This Quarter beginneth with the Suns entrance
into the first scruple of the Tropical Signe Can-
cer, being this year upon Monday the eleventh day
of June, 5. minutes past five in the afternoon, and
continueth the Suns iteration through Cancer,
Leo and Virgo. At this time the Sun maketh his
nearest approach to our Zenith, having the greatest
North declination from the Equinoctiall, thereby
causing the longest day and shortest night, in the Nor-
thern Hemisphere. About this time the Sun is in
his Apogeeon, or point farthest distance from the
Earth.

Of

Wood-house, 1655.

Of Autumn.

This Quarter beginneth with us on Thursday the 13. of September; 50. minutes past 7. in the forenoon; at what time the Sun passeth into the Equinoctiall Signe Libra, thereby co-equating the dayes and nights throughout the whole world, being once moze bisfrontall, and equally radiating to the Arctick and Antarctic Poles; and continueth his perambulation through Libra, Scorpio, and Sagittarius.

Of Winter.

This Quarter takes beginning at the Suns ingresse into the first temple of the imaginary Signe Capricorn; which happeneth this year on Tuesday the 11. day of December, 18. minutes past seven in the afternoon; and continueth the Suns progresse through Capricornus, equinus, and Pisces; being now in his greatest distance from our Zenith, and obliquity from the Equinoctiall, causing the shortest day and longest night to the Northern Hemisphere.

Of the Eclipses this present Year, 1655.

There will be two Eclipses of the Sun, but no Eclipse of the Moon: The first Eclipse will happen the 27. of January, the beginning at 1. hour 6. min. in the afternoon. The mid-dle at 1. hour, 44. min. in the afternoon. The end at 2. hour, 23. min. in the afternoon.

The other Eclipse is the 22. day of July, but not visible in *England*; therefore I shall say no more thereof.
